With  
Davey Acquasafe,  
you can now safely use  
every drop of your tankwater,  
12 months of the year!

Treating tankwater

DAVEY

**ACQUASAFE**

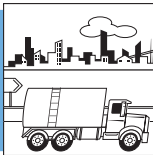

# Here is how Tankwater becomes contaminated

## Roof

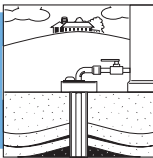

animal & bird droppings washed into your tank

## Tanker

from un-known sources

## Bore

ground water is not always safe

## Dam

animal droppings & farm run off

# Here is how to make it safe

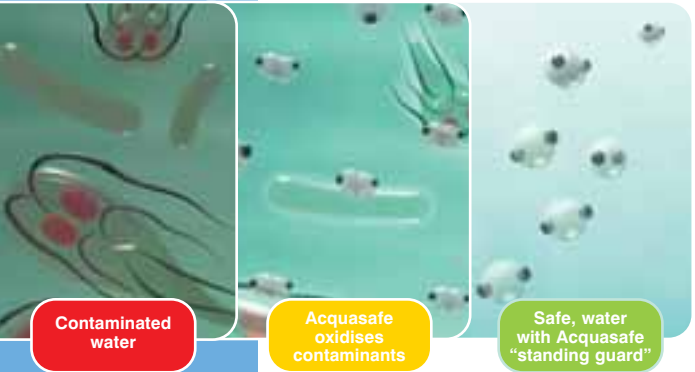

the one-step oxidation process that mimics nature to eliminate tank contamination

## How Acquasafe decontaminates your tankwater

Acquasafe uses the natural process of oxidation to eliminate pathogens which includes bacteria, viruses, mould, algae, fungi and bio film.

### How oxidation works

### Why Acquasafe is the ideal replacement for Chlorine?

-  Chlorine leaves a strong taste and odour
-  Chlorine oxidises organics and can form harmful bi-products including cancer causing materials
-  Chlorine is consumed in hours and water is re-contaminated by the next filling of your tank

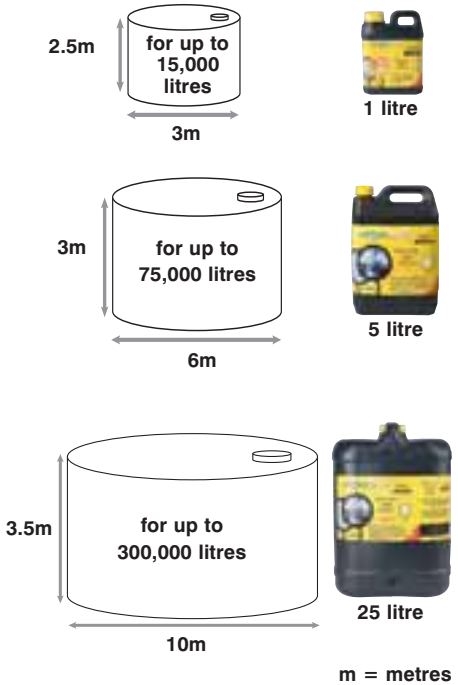

-  Acquasafe leaves no taste and odours
-  Acquasafe oxidises organisms and reverts back to oxygen and water
-  Acquasafe lasts up to 2 months even when water is added to your tank

## Dosage

1 litre of Acquasafe for every 15,000 litres of tankwater.

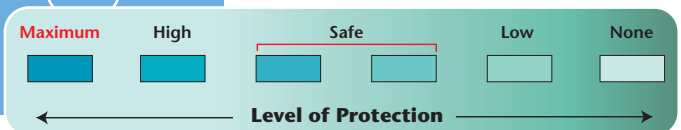

## Economical

less than a third of a cent per litre of treated tankwater.

## Testing

The safety of your water is monitored simply with colour changing test strips.

More about how your tankwater becomes contaminated and the nasty 'bugs' and associated diseases that comes with them

## Droppings

from birds, possums and other animals

= *Ecoli, Camphylbacter, Giardia and water born worms*

## Algae

due to light penetration into the tank  
= *bad taste and odours*

## Mosquito larve

as they breed in your tank  
= wrigglers and more mosquito's

## Stagnant Water

caused by long spells of no rain  
= *Rotten egg gas smell, bad taste and harmful diseases*

## Bio Film

from build up of organic matter  
= *bad taste and odours*

## Acquasafe

"stands guard" against all these problems

# Acquasafe is NHMRC approved for treating drinking water.
