

# Save Water

The Leafbusters product can be seen on the Savewater library at [www.savewater.com.au](http://www.savewater.com.au)

**savewater!**<sup>TM</sup>.com.au

The Leafbusters system can be seen at the Sustainable Living House at the Ceres Project in East Brunswick.

## Our Environment

[www.leafbusters.com.au](http://www.leafbusters.com.au)

### The Green Factor

The other important "Green Factor" for Leafbusters is that it insists that all the wasted materials it removes are recycled. Leafbusters as a company then ensures that it does not adversely impact the environment by its products, meshes, metal attachments or other people's homes or buildings.

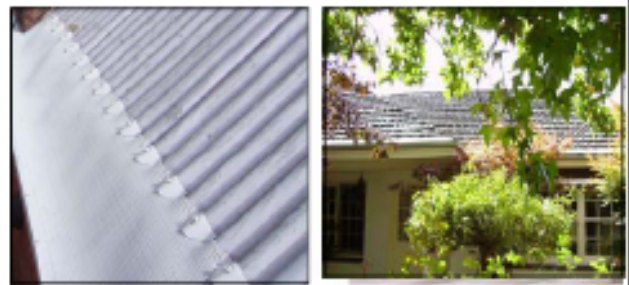

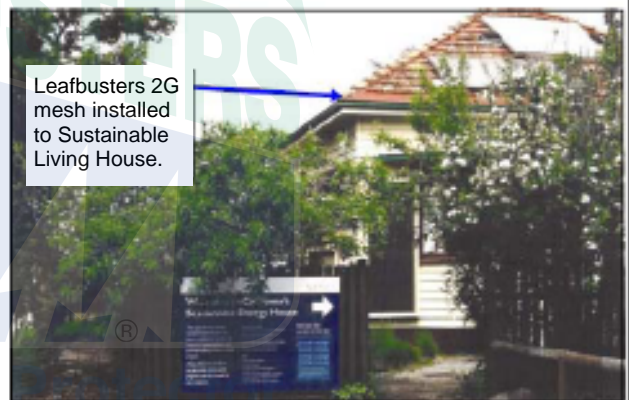

**Leafbusters has been pro-active in support for the sustainability of our Environment.**

**Established 15 years ago**, Leafbusters has a long history of servicing the Australian home owner, Government buildings, Commercial, Industrial and Sustainable Environmental test houses for sustainable living.

**Leafbusters 2G mesh** is installed on the Sustainable Living House at the Ceres project in Brunswick East. AS part of the Ceres project, Yarra Valley Water managed the testing from water collected in a rainwater tank.

A number of suppliers contributed equipment to this project including Leafbusters. Leafbusters is a supporter of Savewater®. This product Leafbusters® is listed on the Savewater® product library.

**Harvesting fresh drinking water**  
With Leafbusters you can collect clean rain water for use, either for hot water systems and toilets and or watering the garden, therefore reducing the impact to our precious water supplies & dams.

## Storm Water Management for the protection of Waterways

**Install Leafbusters on guttering to stop leaf debris getting into the gutters.**  
**Save Maintenance Costs & Gutters Last Longer**  
**AND for FREE.....**  
**You reduce the tannin water getting into our waterways....**

### ENVIRONMENT

Our water ways are being poisoned by the reduced levels of oxygen in the water. This is partly caused by a toxin called TANNIN. Produced by decomposing leaves trapped in gutters. Tannin has been known to kill vegetation and fish and increase PH levels in our river systems, contributing to the blue-green algae blooms.

The Leafbusters gutter protection system will dramatically reduce the environmental damage by keeping your gutters free from leaves and debris.

The Leafbusters product has a service life of approx. 20years, therefore reducing the impact to land fill of products with minimal life span (or simply do not work) and are thrown away.
