

THINKTANK Systems

Bluescope Water

A rainwater tank can provide a significant reduction in mains water use and stormwater discharge, particularly when the tank is used for indoors as well as outdoor applications.

BlueScope Water have developed the THINKTANK rainwater harvesting system, designed to maximise the water saved by your rainwater tank.

The THINKTANK rainwater harvesting system incorporates:

- a WATERPOINT rainwater tank
- First flush diversions
- Water filters
- Mains water back-up
- Pressure pump to maximise the use of your rainwater

Rainwater use includes:

- Toilet
- Washing machine (cold washing tap)
- Outdoor uses

The THINKTANK system supplies rainwater for these functions, coupled with a mains water back-up to ensure that a water supply is always available.
